GOOD NOTATION
THE DATA AND AI SCHOOL

BUSINESS ANALYST SYLLABUS

IT Industry-Oriented | Beginner to Job-Ready

Business Analysis • Requirements • Agile/Scrum

SQL • Excel • Power BI • Jira • GenAI

Practical Labs | Industry Documents | Case Studies | Interview Preparation

Designed for students, freshers, working professionals and career-switchers preparing for IT Business Analyst roles.

Recommended duration: 12–16 weeks. Suggested guided learning: 120–160 hours, plus assignments and project work.

Program Overview

Apracticalcurriculumconnectingbusinessneeds,software delivery, data analysis and measurable outcomes.

PROGRAM DETAIL	RECOMMENDATION
Duration	12–16 weeks; adjustable to batch pace
Prerequisites	Basic computer skills; no coding experience required
Learning method	Instructor demos, role-play, document writing, tool labs, case studies and capstone
Core outcome	Elicit requirements, document user needs, support Agile delivery, analyze data and communicate recommendations
Portfolio	BRD/FRD or equivalent requirements pack, process diagrams, SQL analysis, dashboard and capstone case study

Detailed Curriculum

MODULE 1	Business Analysis Foundations
FOUNDATION	• Business Analyst role, responsibilities and BA vs Product Owner / Project Manager / Data Analyst • Business value, problem statements, objectives, scope and success measures • Stakeholder identification, stakeholder maps, RACI and communication planning • SDLC: Waterfall, Agile, Scrum and hybrid delivery • Business context, assumptions, constraints, risks and dependencies • Overview of IIBA concepts and BABOK knowledge areas **Practical deliverable:** Problem statement, stakeholder register and project scope outline.

MODULE 2	Requirement Elicitation and Stakeholder Management
CORE BA SKILL	• Interviews, workshops, observation, surveys and document analysis • As-is and to-be analysis; root cause analysis and 5 Whys • Facilitation, active listening, conflict resolution and negotiation • Requirement types: business, stakeholder, functional, non-functional and transition • Prioritization: MoSCoW, impact/effort and value-based decisions • Requirement validation, approval, traceability and change impact analysis **Practical deliverable:** Elicitation plan, stakeholder interview notes, prioritized requirement list and traceability matrix.

MODULE 3	Business Documents and Requirement Writing
DOCUMENTATIO N	• Business Requirements Document (BRD) and functional requirements / FRS • Business Requirement Specification (BRS), scope, assumptions and dependencies • Software Requirements Specification (SRS): purpose and when it is used • User stories, epics, features and acceptance criteria • Use cases, business rules, exception flows and definition of done • Non-functional requirements: performance, security, accessibility and availability • RTM (Requirements Traceability Matrix), change log and sign-off **Practical deliverable:** A requirements pack for an online shopping or loan application feature.

MODULE 4	Process Modelling and Solution Design Support
MODELLING	• Flowcharts, swimlane diagrams and process mapping • BPMN fundamentals: events, activities, gateways and pools/lanes • UML use-case and activity diagrams • Context diagrams, data-flow diagrams and basic entity relationship diagrams • Gap analysis, impact analysis and feasibility assessment • Wireframes, low-fidelity prototypes and screen annotation • Current-state vs future-state process improvement **Practical deliverable:** As-is/to-be process map, use-case diagram and low-fidelity wireframe.

MODULE 5	Agile, Scrum, Jira and Confluence
AGILE DELIVERY	• Agile principles and Scrum roles, events and artifacts • Product backlog, sprint backlog, refinement, planning, review and retrospective • Writing and splitting user stories; acceptance criteria using Given/When/Then • Jira projects, epics, stories, tasks, bugs, workflows, boards and dashboards • Confluence pages, decision logs, meeting notes and requirements collaboration • Definition of Ready / Done, dependencies, blockers and change handling • UAT coordination, defect triage and release support **Practical deliverable:** Create a sample Jira backlog with epics, user stories, acceptance criteria and sprint plan.

MODULE 6	Excel, SQL and Business Data Analysis
DATA SKILLS	• Excel formulas, IF, SUMIFS, COUNTIFS, XLOOKUP, PivotTables and charts • Data validation, conditional formatting, cleaning and Power Query basics • SQL SELECT, WHERE, ORDER BY, GROUP BY and HAVING • INNER/LEFT joins, subqueries, CTEs and CASE expressions • Window functions: ROW_NUMBER, RANK and aggregate OVER clauses • KPI definitions, data quality checks, reconciliation and exploratory analysis • Translating business questions into measurable data queries **Practical deliverable:** Analyze orders, customers and revenue; write SQL queries and create an Excel KPI report.

MODULE 7	Power BI, KPIs and Business Reporting
REPORTING	• Data import, Power Query transformations and data modelling • Relationships, star schema basics and date tables • DAX fundamentals: measures, CALCULATE, SUMX and time intelligence introduction • KPIs, targets, trends, drill-through, slicers and report usability • Dashboard storytelling, executive summaries and insight recommendations • Data refresh, access considerations and validating totals against source systems **Practical deliverable:** Build a management dashboard and a one-page insights summary.

MODULE 8	GenAI and AI-Assisted Business Analysis
MODERN WORKFLOW	• Responsible use of GenAI for brainstorming, meeting summaries and document drafts • Prompting for user stories, acceptance criteria, test scenarios and requirement questions • Comparing AI-generated content with stakeholder evidence and source documents • Using AI to summarize feedback, classify requirements and identify ambiguity • AI-assisted SQL explanations and dashboard narrative drafting • Confidentiality, data privacy, bias, hallucinations and human review • Introduction to AI agents and workflow automation; when human approval is essential **Practical deliverable:** Use sample non-sensitive requirements to draft stories and test cases, then review and correct them.

MODULE 9	Testing, UAT and Software Delivery
DELIVERY QUALITY	• Testing lifecycle and the BA role in QA collaboration • Test scenarios, test cases, expected results and acceptance tests • UAT planning, business-user coordination, sign-off and evidence • Defect lifecycle, severity vs priority, reproduction steps and triage • Requirement-to-test traceability and regression impact analysis • Release notes, training material, SOPs and change management **Practical deliverable:** UAT plan, test cases, defect log and release readiness checklist.

MODULE 10	Capstone, Interview and Career Preparation
JOB READINESS	• End-to-end case study from business problem to recommended solution • Presenting trade-offs, risks, assumptions, dependencies and measurable outcomes • Mock stakeholder interview and requirements workshop • Scenario-based questions: changing scope, conflicting stakeholders and unclear requirements • SQL, Excel, Agile, Jira and documentation interview exercises • Resume, LinkedIn, portfolio presentation and STAR-based behavioral answers **Practical deliverable:** Present a complete case study with requirements, process diagrams, data analysis and UAT artifacts.

Recommended Tool Stack

CATEGORY	TOOLS / OUTPUTS
Requirements & collaboration	Microsoft Word, Excel, PowerPoint, Confluence or equivalent documentation tools
Agile delivery	Jira or an equivalent backlog/work management platform
Process modelling	Draw.io, Visio, Lucidchart or equivalent diagramming tools
Data querying	SQL Server or MySQL; practice on realistic relational datasets
Analysis & reporting	Excel, Power Query and Power BI
Prototyping	Figma or another wireframing tool; low-fidelity prototypes are sufficient
GenAI assistance	Approved enterprise AI assistant or LLM tool; use only non-sensitive/sample data in public tools

Industry-Style Projects

Project 1: E-commerce Checkout Improvement

Gather requirements tor educecartabandonment. Includestakeholder map, problem statement, as-is/to-be process, user stories, acceptance criteria, edge cases and UAT tests.

Project 2: Banking / Loan Application Workflow

Map theapplication process,identifybottlenecks,definevalidationrules, document functional and non-functional requirements, and create a traceability matrix.

Project 3: Sales KPI Dashboard

UseS QL andExcel/PowerBItoanalyzerevenue, order volume, average order value and regional performance; provide actionable recommendations.

Project 4: Customer Support Ticketing System

Createa nAgilebacklog,Jiraworkflow,ticketprioritizationrules,reporting requirements and a UAT plan.

Project 5: GenAI-Assisted Requirements Pack

Use sample businessn otestodraftrequirements,storiesandtestscenarios; document review steps, risks, privacy controls and human approval.

Suggested 14-Week Training Plan

WEEK	FOCUS	DELIVERABLE
1	BA foundations and SDLC	Problem statement and scope
2	Stakeholders and elicitation	Stakeholder register and interview notes
3	Requirements and prioritization	Requirement list and priorities
4	BRD/FRD, user stories, acceptance criteria	Requirements pack
5	Process maps, BPMN and use cases	As-is/to-be diagrams
6	Agile/Scrum and Jira	Backlog and sprint plan
7	Confluence and collaboration	Decision log and meeting notes
8	Excel for business analysis	KPI workbook
9	SQL fundamentals and joins	SQL analysis assignment
10	Power BI and KPI reporting	Interactive dashboard
11	GenAI for BA workflows	Reviewed AI-assisted requirements
12	Testing, UAT and defects	UAT pack and defect log
13	Capstone build and review	End-to-end case study draft
14	Presentation and interview prep	Final presentation and mock interview

Assessment and Completion Checklist

- Weekly exercises: requirement writing, stakeholder scenarios and process modelling.
- Document review: BRD/FRD or equivalent requirements pack with clear scope and assumptions.
- Agile practice: backlog, user stories, acceptance criteria and Jira workflow.
- Data skills: SQL query assignment plus Excel or Power BI reporting task.
- Testing: UAT plan, test cases, defect log and requirement traceability.
- GenAI practice: demonstrate source checking, privacy awareness and human review.
- Capstone presentation: explain the problem, proposed solution, risks, success metrics and trade-offs.
- Interview readiness: scenario-based questions, communication practice and resume review.

WHAT A JOB-READY BUSINESS ANALYST SHOULD DEMONSTRATE

Understand the business problem → identify stakeholders → elicit and document requirements → model the process → support delivery → validate the solution → measure whether it delivers value.
